

PA-02, PA-03 Package-Port™ package entry system

Enables a leak tight entry for seal strength and leak testing of flexible packages

For use with the TME BT Integra-Pack Package test Instrument and fixtures. The TME Package-Port system allows consistent penetration of flexible packages for seal strength and leak integrity testing.

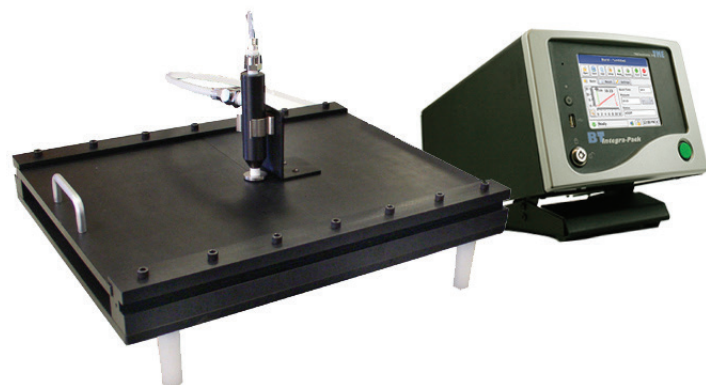

The flexible Package Port is attached to the package using a double-sided adhesive disk to create a leak tight path between the package and the port. This allows the operator to simply and repeatably insert the test probe into the package for restrained and unrestrained package testing.

Applications in medical, food and pharmaceutical package testing.

Low cost and dependable, easy to use, decreases package testing time.

Increases the reliability on the results and brings real time test data to the production line.

Complies with ISO-11607 standards and ASTM test methods.
