ATRYA

Water Recirculating System

MODELO ReSy-7000

Atrya is a company committed to constant innovation, allowing us to offer our clients comprehensive solutions to current challenges such as water preservation and conservation.

By taking care of this vital natural resource, the ReSy system provides the following benefits:

Advantages

Improves equipment performance by ensuring proper pressure supply and water flow.

Help reduce service costs by extending the lifespan of equipment components, thus increasing the interval between preventive and corrective maintenance.

The tub connects directly to the BR-7000 equipment, so the operator does not need to perform any additional actions. Once the Start Test button is pressed on the equipment's pump, the tub activates automatically.automática.

Automatic cleaning and maintenance functions.

Technical data

Electrical supply voltage	127 – 220 VCA (60hz)
Consumption current	2A
Power	220W
Supply water pressure	Minimum 20 psi (137.9 kPa), recommended 30 psi (206.8 kPa)
Water supply temperature	18 °C (64.4 °F) to 25 °C (77 °F)
Maximum volume	26.5 liters (7 gallons)
Working volume	22.4 liters (5.91 gallons)
Safety volume	8 liters (2.11 gallons)
Approximate system weight	44.7 kilograms (98.54 pounds)
Dimensions (Front x Back x Height)	720 x 590 x 930 mm (28.34 x 23.22 x 36.61 in)
Water intake connection	3/8" NPT
Drain connection	3/8" NPT

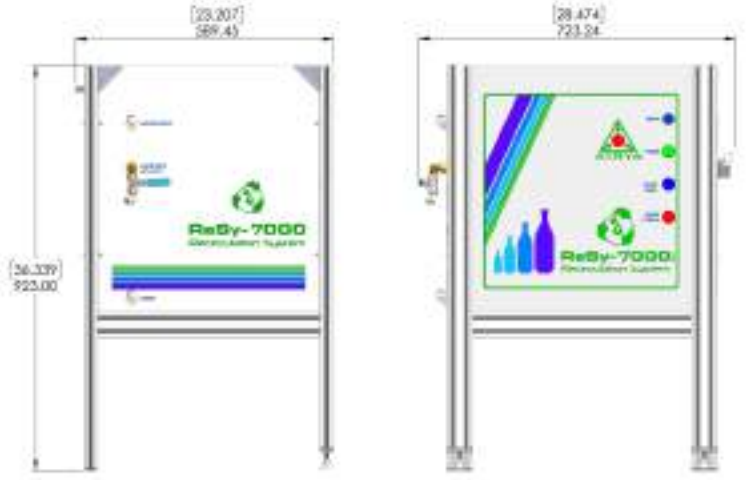

Sustainability and Design

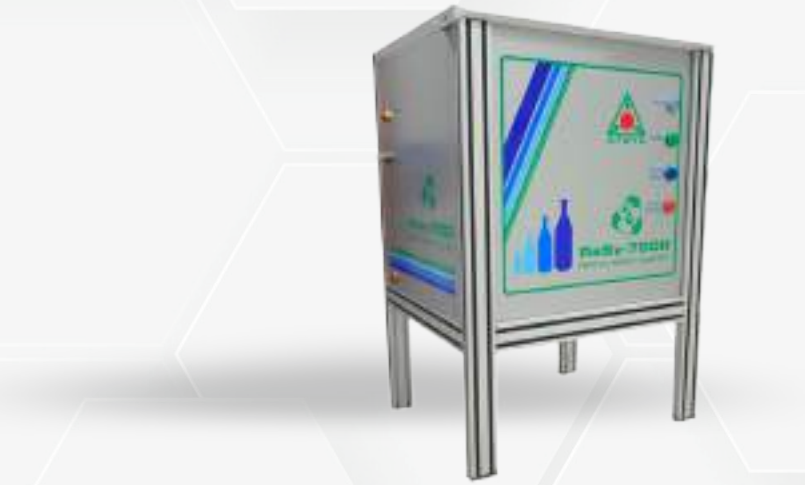

The responsible use of such an essential resource must be optimized to avoid future supply risks and to contribute to environmental care. For this reason, an adaptable system has been developed for our BR 7000 series internal pressure testing equipment. This system contributes to water conservation by allowing reuse in a considerable number of tests.

The recirculating system is built with structural aluminum and incorporates:

•Automatic refill control and level protection.
•Automatic and manual draining functions.
•A connection interface compatible with the BR 7000 models.
•A filtration system that prevents the presence of substances, salts, and odors, extending the useful life of the water.
